

B WELDFENCE

w h y w e l d f e n c e ?

Strength

BRC Weldfence is manufactured from high tensile strength steel wires, electrically welded together to provide a strong mesh panel.

Rigidity

Each mesh panel has been “rolled” into a wedge at the top and bottom, giving the fence rigidity. Alternatively, cresses can be formed at specified intervals along the height of the fence for rigidity.

Ease of Installation

Our fencing systems come complete with matching pre-drilled fence posts and panel clips, ready for quick installation.

Dura

All parts of the fence are hot-dip galvanised, resistant to rust and corrosion. The panels and also be coated with an optional layer of coloured powder.

Aesthetic

With a simple geometry and neat design, BRC Weldfence easily blends into any environment without ruining the backdrop. To provide more aesthetic options, BRC Weldmesh is also available in powder coated finish in 7 standard colours.

Zero Maintenance

With resistance to deformation and lasting protection against rust and corrosion, no maintenance is required. When damaged, individual fence panels can be replaced without affecting the adjacent panels.

Standard Weldfence

Our flagship product, the standard BRC Roll-top Weldfence has proven to be the perimeter demarcation of choice for many industrial and commercial users.

Double-panel System

Featuring two BRC Weldfence panel fitted one on top of the other, this unique system allows the maximum height of the fence to be doubled. It is ideal for use in sports and recreational complexes, and medium security installations.

Customisability

BRC Weldfence can be fixed via a number of alternate means, such as using base plates to mount on an existing retaining wall. Also gates can be customised to offer user a multitude of choices to customise premises with matching gates and fencing systems.

s e c u r i t y w e l d f e n c e

Anti-climb Design

BRC Security Weldfence systems are designed with much smaller grid size, making it extremely difficult to scale the fence.

Secure Fastening

Fence panels are fixed onto the fence posts with self-tapping screws instead of nuts and bolts. In addition, the fastening is done behind the posts from the inside, out of view and reach from the outside.

Fully Customisable

BRC understands that different facilities require different security solutions. BRC Security Weldfence is fully customisable to fit into your requirements.
